

One step from messy notes to maintained wiki

Using an LLM for non-coding tasks

The PAIN

	May 28th	Room	Why I'm interested
09:15	Keynote		
11:05	Most AI agents are broken let's fix that	Tortellini	I'm interested in general in "AI agents" topic, agree with the part of the abstract sayi
11:45	Graph theory and NetworkX 101 – doing stuff with dat	Gnocchi	I am interested in graph theory, especially when "knowledge graphs" are part of the
12:25	Pythia: framework per la gestione centralizzata e valid	Lasagna	My prompt management is all over the place, and I have no clue about a good fram
14:40	The Bakery: How PEP810 sped up my bread operatio	Tortellini	Beside my job, am a hobbyist baker, and mostly following this talk for good fun
15:20	Lightning talks	Tortellini	
16:15	Building Full-Stack Python Apps with Cross Inertia, Re	Passatelli	I would like to learn how to build full-stack apps, it's something that I've never done.
17:30	Keynote		
19:30	PyDrinks		
	May 29th		
09:15	Keynote		
11:40	Answerability-First RAG for Mixed Text and Tables	Gnocchi	I've build a simple RAG tool for tabular data (system requirement list) and regulato
12:35			
14:50	Designing Memory for AI Applications in Python	Lasagna	Memory is the layer that provides learning and improve the models with usage. Its i
15:45	Building a RAG from ground up with Hexagonal Acrhit	Lasagna	RAG architecture is interesting
16:25	You're Not Starting Over: Lessons from Changing Role	Passatelli	This is a more general talk, could be useful for people networking, see what the futu
17:40	Keynote		
20:30	PyDinner

← Luca's PyCon Italia 2026 conference wiki

← Agent instructions: ingest, synthesize, quiz, lint

← Content catalog (talks, speakers, topics, reflections...)

← Chronological operation log

← READ-ONLY raw inputs

← Official program

← Day 1 notes dump

← Maintained by LLM: normalized, interlinked output

← talk pages

← speaker bios

← 23 concept pages (RAG, MCP, causal inference, agents...)

← Interest analysis + 7 reading stubs

← saved queries and quizzes

Benefits and risks

- I dumped all my random notes from yesterday (photos, the markdown, and will put youtube transcript later) in sources/ I called the ingest workflow to have them land in the right place: new topic, question, todo, a speaker I want to remember
- I could prepare for the conference, asking “what three topics can I get a basic understanding in two hours”
- I can pick a topic and get quizzed interactively if I feel like going into a rabbit-hole
- *Plus* whatever you can think of asking a wiki
- The wiki can grow crazy because generating new page is so cheap: my work goes in policing the size of the wiki.
- The opportunity cost: copying notes by hand has a value because while doing it, we use our brain to reprocess. To mitigate, I use the interactive quiz

DEMO

Takeaway message

- Look up Karpathy's “LLM wiki” pattern
 - Try it on any source: papers, this conference notes, documentation, a repo
- To try the application to PyCon, on github :
`LucaBartolini/wiki-llm-conference`
